Table of Contents

1.	Introduction	1
1.1.	2023 Edition Update	1
2.	Working Group Vision	2
2.1.	Scope of Working Group Effort.....	2
2.2.	Linkages and Stakeholders.....	3
3.	Today's Landscape	5
3.1.	2021 Massive MIMO Workshop.....	5
3.1.1.	Very Large Antenna Arrays	6
3.1.2.	Open Radio Access Network (Open RAN)	6
3.1.3.	Energy Efficiency, Security, and Deployment	6
3.1.4.	Architectural, Spectral, and Algorithmic Challenges	6
3.2.	2022 Massive MIMO Workshop.....	7
3.2.1.	Keynote Presentations	8
3.2.2.	Emerging New Technology Trends in Massive MIMO	8
4.	Future State (2033)	10
4.1.	mmWave Massive MIMO for HetNets	10
4.2.	MAC-PHY Cross-Layer Design for Massive MIMO in Future Wireless Systems	10
4.3.	Secure and Private Communications in Massive MIMO Wireless Systems	10
4.4.	Application of Artificial Intelligence and Machine Learning into Massive MIMO Wireless Systems.....	11
4.5.	Enabling Massive Connectivity with Massive MIMO	11
4.6.	Autonomous Massive MIMO for a Variety of Applications.....	11
5.	Needs, Challenges, Enablers, and Potential Solutions	12
5.1.	Summary	12
5.2.	mmWave Massive MIMO for HetNet.....	12
5.2.1.	Cell Association and Mobility Management	12
5.2.2.	Big Data Management with QoS Constraints.....	12
5.2.3.	Low-Cost Channel State Information Acquisition and Beamforming.....	13
5.2.4.	Resource Management	13
5.3.	Channel Estimation	13
5.3.1.	Sparse Adaptive Filtering Algorithms for Channel Estimation in Massive MIMO Systems	13
6.	Networking Planning and Operation	14
6.1.	Guarantee of Coverage.....	14
6.2.	Real-Time Support.....	14
6.3.	Implementation Cost and Low Carbon Footprint.....	14
6.4.	Spectral Efficiency	14
6.5.	Network Integration	15
7.	MAC-PHY Cross-Layer Design for Massive MIMO in Future Wireless Systems	16
7.1.	Physical Design.....	16
7.2.	MAC Protocol Designs	16
7.3.	Front-Haul Design.....	16
7.4.	Back-Haul Design	16
8.	Efficient Receiver Architecture Design	17
8.1.	Physical Layer Design.....	17
8.2.	MAC Design	17
8.3.	Front-Haul and Back-Haul Design.....	17

8.4.	Security in Cross-Layer.....	17
9.	Secure and Private Communications in Massive MIMO Wireless Systems	18
9.1.	Design of Precoding Schemes	18
9.2.	Cooperative Secure Transmission & Local Processing / Training	18
9.3.	Pilot Contamination	18
9.4.	Hardware Impairments.....	19
9.5.	Energy Efficiency Design	19
10.	Academia and Industry Engagement	20
10.1.	Efficient Design	20
10.2.	Relay and Artificial Noise Aided Techniques.....	20
10.3.	Blind Channel Estimation and Precoding	20
10.4.	Hardware Impairment	20
10.5.	Energy Efficient Signal Processing.....	20
11.	Application of Artificial Intelligence and Machine Learning into Massive MIMO Wireless Systems	21
11.1.	Resource Allocation Based on Machine Learning	21
11.2.	Channel Estimation Based on Machine Learning	21
11.3.	Signal Detection Based on Machine Learning	21
11.4.	Interference Management Based on Machine Learning.....	21
11.5.	Physical Layer Design Based on Machine Learning.....	21
11.6.	Detailed Design Considerations	22
11.7.	Overcome Overfitting and Underfitting	22
11.8.	System Modeling	22
11.9.	Modeling of Modulation and Demodulation.....	22
12.	Enabling Massive Connectivity with Massive MIMO	23
12.1.	Low Complexity Channel Estimation	23
12.2.	Support for Machine-Type Devices	23
12.3.	Hybrid Precoding Design	23
12.4.	Communication Integration with M2M and Cloud / Edge Network	23
12.5.	Interference Coordination and Management.....	23
13.	Challenges with Massive MIMO, Machine-Type, and Massive Connectivity	24
13.1.	A Simple Channel Acquisition Method	24
13.2.	New MAC Protocols that Support More Users.....	24
13.3.	Diverse Requirements from Machine-Type Communications	24
13.4.	Hybrid Precoding Design	24
13.5.	Related Standards.....	24
14.	Autonomous Massive MIMO for a Variety of Applications	25
14.1.	Throughput Optimized Massive MIMO.....	25

ABSTRACT

The use of a large number of antenna elements, known as Massive MIMO, is seen as a key enabling technology in the 5G and Beyond wireless ecosystem. The intelligent use of a multitude of antenna elements unleashes unprecedented flexibility and control on the physical channel of the wireless medium. Through Massive MIMO and other techniques, it is envisioned that the 5G and beyond wireless system will be able to support high throughput, high reliability (low bit-error-rate (BER)), high energy efficiency, low latency, and an internet-scale number of connected devices.

Massive MIMO and related technologies will be deployed in the mid-band (sub 6 GHz) for coverage, all the way to mmWave bands to support large channel bandwidths. It is envisioned that Massive MIMO will be deployed in different environments: Frequency Division Duplex (FDD), (Time Division Duplex (TDD), indoor / outdoor, small cell, macro cell, and other heterogeneous networks (HetNet) configurations. Accurate and useful channel estimation remains a challenge in the efficient adoption of Massive MIMO techniques, and different performance-complexity tradeoffs may be supported by different Massive MIMO architectures such as digital, analog, and/or digital / analog hybrid. Carrier frequency offset (CFO), which arises due to the relative motion between the transmitter and receiver, is another important topic. Recently, maximum likelihood (ML) methods of CFO estimation have been proposed, that achieve very low root mean square (RMS) estimation errors, with a large scope for parallel processing and well suited for application with turbo codes.

Massive MIMO opens up a whole new dimension of parameters where the wireless applications or other network layers may control or influence the operation and performance of the physical wireless channel. To fully reap the benefits of such flexibility, the latest advances in artificial intelligence (AI) and machine learning (ML) techniques will be leveraged to monitor and optimize the Massive MIMO subsystem. As such, a cross-layer open interface can facilitate exposing the programmability of Massive MIMO through techniques such as network slicing (NS) and network function virtualization (NFV). Finally, security needs to be integrated into the design of the system so the new functionality and performance of Massive MIMO can be utilized in a reliable manner.

Key words:

5G, Massive MIMO, beamforming, mmWave, HetNet, energy efficiency, channel estimation, CFO estimation, hybrid architecture, beam optimization, average signal-to-noise ratio per bit.
